

## **CHARON-VAX in British Telecom's BTextact Technologies**

BTextact Technologies, BT's advanced communication technologies business, uses CHARON-VAX/XL to emulate VAXes and run a number of legacy and fallback software development environments on them. Mr. David Sharples, Applications Engineering Team Manager, says that CHARON-VAX gives them the possibility of continuing using a VAX software development environment for one of their key projects, and has rapidly allowed them to future-proof and preserve a legacy software development at a competitive price, as well as provide a fully supportable "hot fallback" development environment, should it ever be required.
